The E-coustic Systems LSB-D10 is a high-output subwoofer system designed to provide high fidelity, low frequency audio reproduction from a relatively small enclosure. The LSB-D10 provides exceptionally linear low frequency extension that integrates seamlessly with E-coustic Systems full range loudspeakers. This is particularly important for systems that utilize a pipe organ, or when a venue lacks sufficient low frequency information. The LSB-D10 is provided with a flat black painted finish and a black coated steel grille.
